

Bilirubin Direct Method update for Beckman DxC users.

Dear Participant,

As part of our commitment at RIQAS to continually make improvements to our EQA programmes, we have been reviewing the method codes for Bilirubin Direct using Beckman DxC instruments in the Clinical Chemistry programme.

Due to a bi-modal split new method groups have been created for participants using the Diazo with Sulphanilic Acid method on Beckman DxC Instruments.

We will update your assay details to reflect this new code in the near future and you will be able to see the changes on your report. If you are no longer using this method please can you update your assay details on RIQASNet or inform RIQAS on mail@riqas.com

If you require any further information please do not hesitate to get in touch.

Kind Regards

Lauren Devlin

Stephen Doherty
